

## Windows 10 Wireless (Alternative Setup)

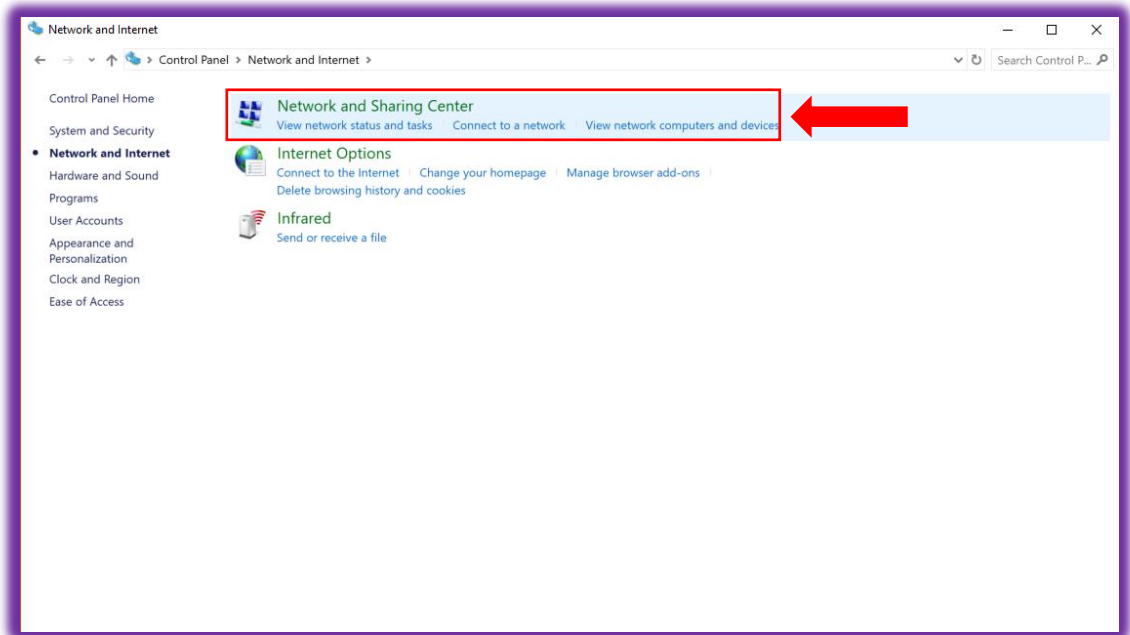

1. Click on your Cortana icon in the lower left hand corner of the screen.  
Type “**Control Panel**” and press enter.

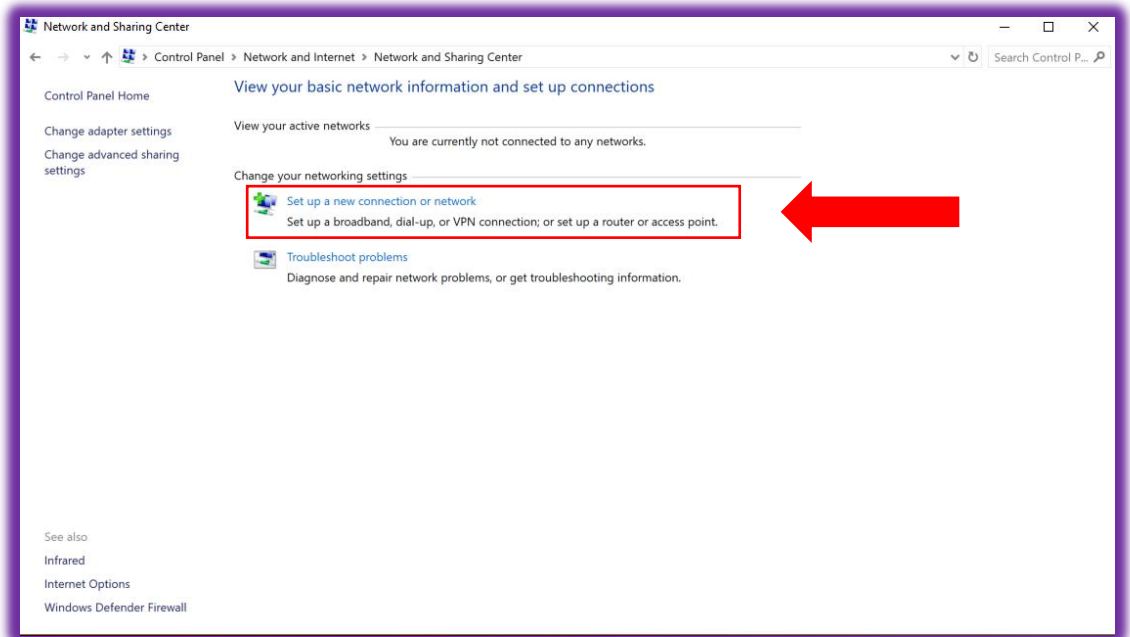

2. Select “**Network and Internet**”

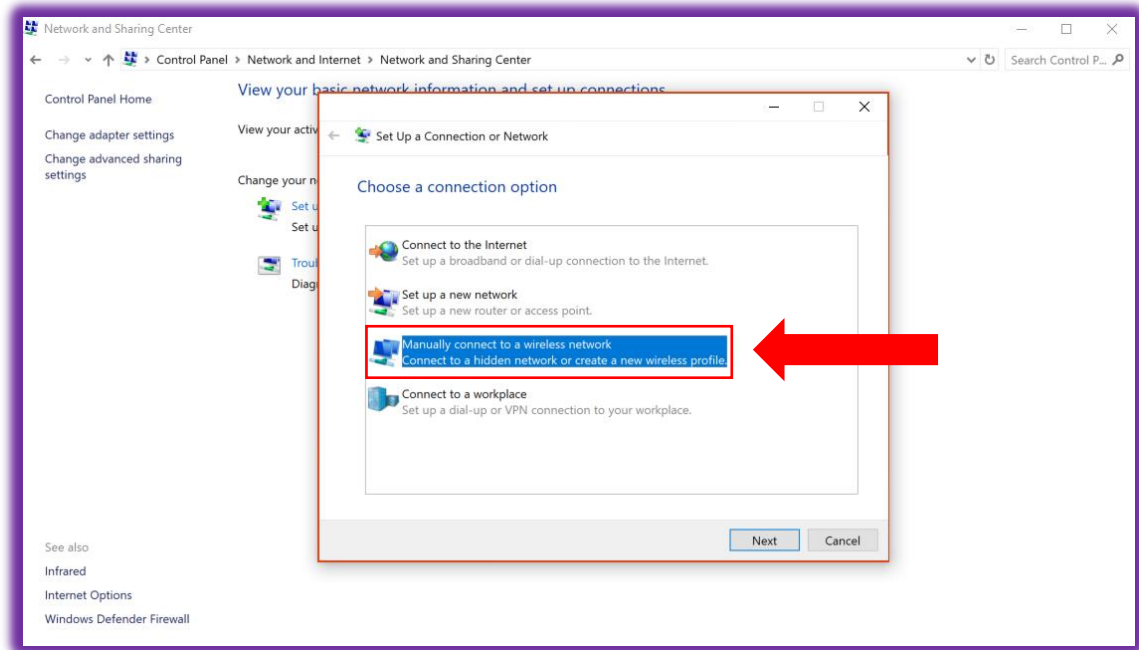

### 3. Select “Network and Sharing Center”

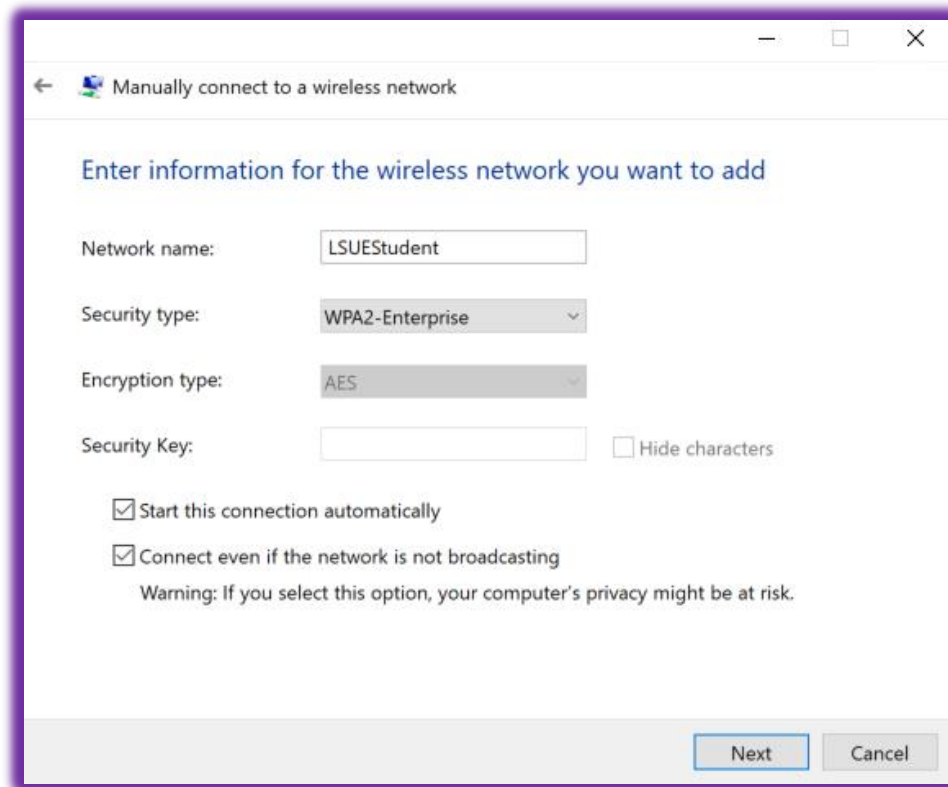

### 4. Select “Set up a new connection or network”

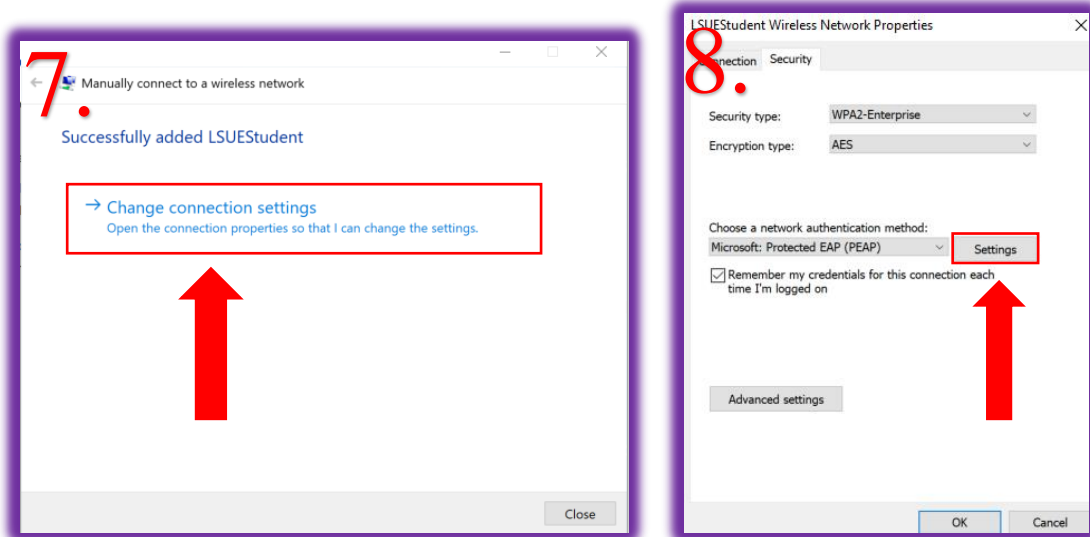

5. Select **“Manually connect to a wireless network”** and click **“Next”**

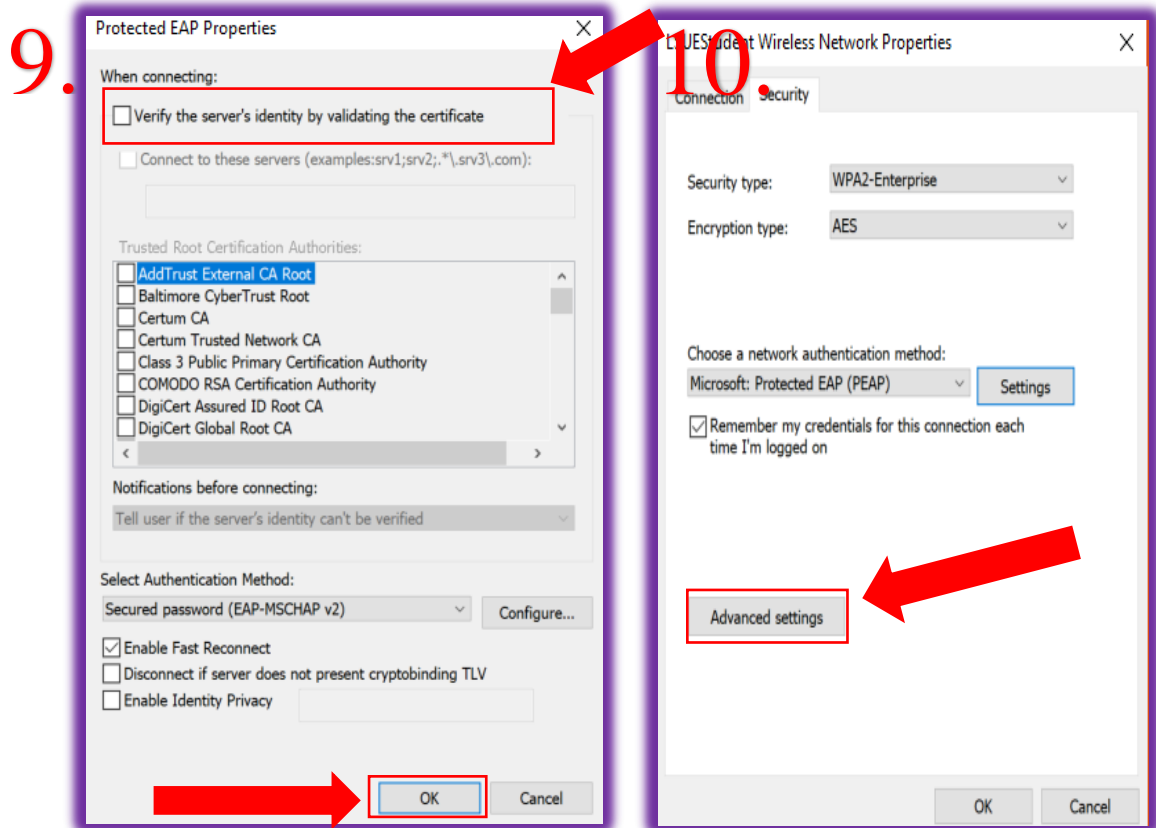

6. Fill in the information below and click **“Next”**

7. Click **“Change Connection Settings”** (Picture on left)
8. Select **“Security”**. Make sure the information is like the picture below and click on **“Settings”** next to the **“Choose a network authentication method”** (picture on right)

9. Uncheck the box that says **“Verify the server’s identity by validating certificate”**, then click on the button **“Configure”**. Make sure the box **“Automatically use my windows logon name and password is unchecked”**. Click **Ok**, click **Ok**.
10. Now click on **“Advanced Settings”**

11. Under the **802.1X** settings tab, put a check in the **Specify authentication mode:**, select **User Authentication** from the drop down box, then click the **Save credentials** button. A box will pop up and this is where you will type in your username and password. Once you are done, click ok, click ok, click ok, then click close.
